

Whole Field Planning Overview

Whole field sampling and planning is available from RHIZA. This service can be added and used alongside the Base package, enhancing the benefits to your business.

Create bespoke nutrient applications for fertilisers or manures which can easily be recorded in Contour, and reports such as NMP & NMax are downloadable to make sure you remain compliant. Soil samples can either be taken by your account manager or existing soil analysis results can be uploaded directly to the Contour platform. Our RB209 linked recommendations allow you to easily match crop requirement, identify index build and calculate the nutrient top- up required.

BASE package features

-  Hyper-local farm weather data
-  Satellite imagery
-  Soil data
-  Crop growth stage
-  Contour Mobile scouting app
-  Pest and disease forecasting

Whole field planning in Contour

-  Full nutrient management including N, P, K, Mg, & S
-  Compliance reports for nutrient applications and N Max
-  Nutrient sample per field
-  Upload your own sampling data
-  Access your data online via the Contour platform
-  Organic matter and custom analysis for manures
-  NVZ Risk Maps
-  Custom rulesets for nutrient recommendations
